Hiring Manager
Analyst I, Reach and Partnerships (Marketing Analytics)
DraftKings
Boston, MA

Subject: Application for Analyst I, Reach and Partnerships (Marketing Analytics) - DraftKings

Dear Hiring Manager,

I am writing to apply for the Analyst I, Marketing Analytics role supporting the Growth Marketing Team's Reach and Partnerships channels. I hold an M.S. in Computer Science from Washington University in St. Louis and a B.A. in Computer Science and Data Analytics from Ohio Wesleyan University, and across both I have built a habit of pairing SQL/Python data work with dashboards that stakeholders actually use to make decisions — the combination this role asks for.

As an AI Engineer Intern at Crittero, I built a TensorFlow/Keras recommendation model achieving 80% accuracy by modeling engagement timing and content preference across seven distinct user personas, direct experience quantifying which content and timing patterns drive engagement by audience segment, the same kind of question that separates a working Audio or Influencer channel from an underperforming one. Earlier, as a Data Analyst Intern at Lab714, I wrote SQL queries and built AWS data pipelines feeding client-facing dashboards that surfaced trends and anomalies, helping clients cut costs by 20%.

As a Graduate Teaching Assistant for a data engineering course, I taught Snowflake, Airflow, Spark, Kafka, and Flink to a graduate cohort and mentored capstone teams from raw datasets to production dashboards, reviewing their metric definitions and visualization choices for stakeholder clarity. For my thesis, I designed a leave-one-participant-out cross-validation framework to rigorously benchmark six model architectures, the same hypothesis-driven evaluation habits I would bring to testing and measuring campaign performance. I also regularly integrate LLM tooling, including Gemini and OpenAI APIs and agentic coding workflows with Claude Code, into my analytical work, and I am glad to see that curiosity matched by this role's mandate to apply emerging AI tools to analytics workflows.

Thank you for considering my application. I would welcome the opportunity to discuss how my data pipeline, dashboarding, and audience-modeling background could support the Reach and Partnerships team's marketing investment decisions.

Sincerely,

Aadarsha Gopala Reddy
