Hiring Manager
Business Intelligence & Planning Department
Safety National
1832 Schuetz Rd, Saint Louis, MO 63146

Subject: Application for BI Data Analyst - Business Intelligence & Planning Department

Dear Hiring Manager,

I am writing to apply for the BI Data Analyst position in the Business Intelligence & Planning Department at Safety National. I completed my M.S. in Computer Science at Washington University in St. Louis, building on an undergraduate degree in Computer Science & Data Analytics. My experience spans data analysis in academic and industry settings, including building reports, querying databases, and translating business needs into technical solutions. Safety National's commitment to data-driven decision-making and financial foresight resonates with how I approach analytical work – grounding recommendations in evidence and clear communication.

My technical background aligns well with the requirements of this role. Through coursework and teaching, I have written SQL queries across MySQL and Snowflake environments and worked with relational database design, table joins, and data structures. I use Microsoft Excel for data organization and analysis, and have developed visualizations using both Tableau and Power BI. As a Graduate Teaching Assistant for a data engineering course at WashU, I guided students through data pipelines with Snowflake, Apache Airflow, and Spark, gaining exposure to data warehousing concepts. My Data Analyst internship at Lab714 involved interpreting client requirements to extract, organize, and analyze data from IoT devices, delivering insights that achieved a 20% reduction in costs for clients.

I am comfortable bridging the gap between business stakeholders and technical implementation. In my Data Analyst internship and graduate assistantship roles, I translated organizational needs into data collection, analysis, and reporting workflows. At WashU's Taylor Family Center for Student Success, I developed process manuals and documentation to establish data evaluation best practices for staff, ensuring transparency and consistency. My experience as a Graduate Teaching Assistant, where I explained complex data engineering concepts to students from varied backgrounds, strengthened my ability to communicate technical information clearly to non-technical audiences.

What draws me to Safety National is the opportunity to contribute to an organization with an 80-year history of stability and integrity. The Business Intelligence & Planning Department's focus on delivering accurate, timely, and actionable intelligence aligns with my belief that analytics is most valuable when it empowers people across an organization to make informed decisions. I am based in St. Louis and value the hybrid work model that supports both focused individual work and meaningful in-person collaboration.

Thank you for considering my application. I would welcome the chance to discuss how my data analysis experience, SQL and Snowflake skills, and collaborative approach could contribute to your team. I am eager to apply my technical background to the meaningful work being done at Safety National.

Sincerely,

Aadarsha Gopala Reddy
